Abstract. This paper discusses the great role of University Libraries in the quality education of college students from the perspective of Ideological and political education, and how university libraries should exert their own advantages to promote the process of quality education of College students. The idea of Ideological and political education requires university libraries to further strengthen their educational functions. They mainly focus on the education of national outlook, historical outlook, national outlook and cultural outlook, honesty, friendliness, law and discipline education, and Humanities education. The main way to achieve this is to strengthen the construction of University libraries' workforce; to realize the linkage and interoperability of various departments, to coordinate education and to work together. Live and grow together; Strengthen environmental construction.

Keywords: Great Ideological and Political Education, University Library, Educational Function, Realization Mechanism.

1. Introduction

The competition of comprehensive national strength is essentially the competition of talents. As the main position of cultivating socialist talents, colleges and universities shoulder heavy historical responsibility. Strong sense of social responsibility and good comprehensive quality are the new requirements of contemporary society for the all-round development of College students. Pushing forward the reform of quality education and improving the comprehensive quality of college students is the goal of the reform of higher education in China and an important step to realize the great rejuvenation of the Chinese nation. As one of the three pillars of universities, libraries not only play an important role in scientific research and teaching, but also in quality education of College students. Under the background of the new era, university libraries should give full play to their advantages and strive to develop new ways and methods of quality education.

2. The Role of University Library in Ideological and Political Education of College Students

From the perspective of Ideological and moral quality, university library is the foundation of students'ideological and moral quality education. Ideological and moral qualities include: a profound understanding of the guiding ideology of the state, mastery of current policies, cultivation of civilized integrity, patriotism, law-abiding, thrifty, dedication, hard struggle of civic morality and socialist concept of honor and disgrace. As one of the three pillars of universities, university libraries not only play an important role in teaching and scientific research, but also play an irreplaceable role in quality education of University students. When students enter the University classroom, teachers'intervention instructions are greatly reduced compared with those in senior high schools, and students' ideological and moral work must be controlled by themselves. Some problems that students do not understand in life and study, especially those related to life outlook, world outlook and value choice, can find reasonable answers in the library. University library has become the most popular place for students.

From the perspective of cultural quality, university libraries are the bases for cultivating college students'cultural quality. Deep cultural foundation, reasonable knowledge structure and good personal spiritual accomplishment constitute a person's cultural quality. When students enter the University classroom, there are great changes in the way of classroom teaching and in senior high schools. Teachers'time for participating in the curriculum is greatly reduced. Students have more time

autonomy. Most of the time students are self-taught. In libraries, students can choose appropriate books to read according to their personal interests, broaden their horizons, increase their knowledge, and constantly improve their own cultural accomplishment in a subtle way.

From the perspective of professional quality, university libraries are the extension of professional quality education in universities. Professional quality takes scientific quality as its core, and includes the ability to solve problems flexibly by using subject knowledge, to grasp professional basic knowledge, to capture frontier information in time, to acquire the latest developments, and to think creatively. After students enter the University classroom, professional knowledge is the most important part of the curriculum content, and the professional quality of college students is gradually formed on the basis of the internalization of professional knowledge. However, some courses have relatively high degree of specialization. It is necessary to timely understand the frontier trends and the latest research results of the subject. It is not enough to rely solely on the knowledge of the curriculum. In addition, the knowledge of various disciplines intersects with each other. If college students want to study comprehensively and systematically, they must read and consult a large number of literature. University library is the best place for students to find information.

From the perspective of physical and mental quality, university libraries are auxiliary institutions for students' physical and mental health education. "The spirit of health lies in the body of health", which is the perfect person pursued by the great educator Rousseau. Good physical and mental qualities include strong physique, sound personality, strong will quality, positive and upward spiritual world, optimistic and open-minded attitude towards life and good psychological adjustment ability. At present, the cultivation of professional knowledge and ability occupies most of the time in University curriculum, while the courses offered by physical and mental quality education are relatively few. If students want to build good physical and mental quality, they can not do without the theoretical support and guidance of University libraries. The abundant collection resources in the library contain a large number of books to cultivate personality, temper will and guide the mediation of psychology. These books and literature resources are the important basis for cultivating students' good physical and mental quality.

3. Advantages of University Library Service in Educating People

3.1 University Libraries are Lifelong Learning Classes for Teachers and Students in Colleges and Universities

School education can not solve the problem of human life-long education once and for all. The knowledge provided by higher education can not meet the needs of practical work. College students need to constantly learn, supplement and update their knowledge structure and skills to meet the needs of practical work. College libraries collect and preserve abundant literature and materials. They are assistant institutions of higher education and teaching. They shoulder the mission of cultivating students' lifelong learning and the responsibility of cultivating and improving students' ability to acquire, refine and use information. University libraries can make use of abundant library resources and network resources to provide high-quality services for teachers and students' lifelong learning. With the development and construction of digital libraries, university libraries with abundant information resources are striving to become the center of teaching and learning in Colleges and universities by actively cooperating with colleges and universities, offering multimedia teaching courses and information consulting services. In recent years, while strengthening its own automation construction, university libraries have also established network resources sharing with university libraries in different regions and other libraries. With these advantages and advanced digital information transmission services, university libraries play an increasingly important role in teaching activities.

3.2 Strengthen the Educational Function of Library and Improve the Self-study Ability of College Students

The learning characteristics of university stage are different from that of middle school stage, which emphasizes more on students' self-study ability. As the saying goes, it is better to teach people to fish than to teach them to fish. College teachers should change their teaching concepts, fully mobilize students' subjective initiative, stimulate students' thirst for knowledge, make them actively study extra-curricular knowledge in the library, cultivate good habits of self-study, and improve their comprehensive quality to meet the needs of modern society.

The all-round development of morality, intelligence and physique is the basic requirement of our educational policy for students. University librarians can make use of the rich collection of literature resources and advanced technology and equipment to strengthen students' basic information theory education and guide students to master the skills of literature information retrieval and utilization. Librarians can actively recommend books and periodicals with correct opinions, novel contents and high scientific value to students. They can also enhance students' interest in learning by conducting lectures and seminars. Through the dissemination and utilization of knowledge, they can play the educational function of libraries and promote the cultivation of students' self-study ability.

4. Specific Measures of University Library Intervention in Ideological and Political Education of College Students

4.1 Optimize the Structure of Library Collection and Expand the Proportion of Quality-Oriented Books.

Firstly, the construction of library collection in university libraries is the material basis for the smooth development of quality education for college students. In the collection construction work, we should adhere to the principle of scientific, systematic and targeted collection structure, increase the proportion of quality-oriented education content books in Library collection, and properly purchase some healthy and elegant humanities and social science books. Secondly, university libraries should regularly conduct surveys and interviews with readers, fully understand the actual needs of students, so as to make more rational use of funds, and scientifically allocate the purchase proportion of natural and social books. In addition, as one of the three pillars of colleges and universities, libraries should actively assist college students in various sports activities, try to meet the needs of books and materials for various activities, while ensuring the continuity and integrity of books and materials, timely supply healthy spiritual and cultural food to college students, and enrich the spiritual and cultural world of College students.

4.2 Set up Skills Training Courses to Improve Students' Information Quality.

College libraries should offer some training courses on library use skills to students in a planned way, so that students can skillfully use and master all kinds of equipment in the library, which is also an important part of improving students' information quality. Universities should offer the course of Document Retrieval to help students improve their ability of searching and retrieving documents through the professional guidance of librarians. Conditional colleges and universities should also set up the course "The Use of Modern Technology and Equipment in Libraries" to systematically tell students the operating guidelines and principles of modern equipment such as computers and fax machines. Human beings have entered the information age, technology is constantly updated and new products emerge in an endless stream. In the 21st century, college students must keep up with the trend of the times so that they can operate modern equipment and tools skillfully, give full play to the role of the "second classroom" of University libraries, and change the narrow idea of emphasizing theory and skills, expertise and compound knowledge in the past curriculum.

4.3 Develop Work-study Activities to Improve Students' Labor Quality and Psychological Quality.

University libraries can organize some volunteer activities and work-study activities to improve the working and psychological qualities of college students during their holidays or after-school hours. In terms of labor quality, University Libraries regularly organize students to participate in the practice of various business activities of the library, enhance their practical and innovative abilities, help students develop good working habits, establish correct working concepts, and then cultivate good will quality of hard work, courage and hard struggle. In practice, it achieves the educational purpose of Cultivating College Students' labor quality. In terms of psychological quality, according to psychologist Eriksson's "Stage of Personality Development Theory", college students are in the age stage of self-identity and role confusion, in the critical stage of physical and mental development, emotional fluctuation is an important stage of psychological development. Therefore, in practice, we should focus on strengthening the education of College Students' psychological quality. The library can cooperate with the Ministry of Learning and Work to make full use of the network resources to establish a psychological counseling website. Psychological counseling website has the advantages of concealment and confidentiality. Students can confide their psychological problems in the network, and take effective measures to solve students' psychological problems in time under the guidance of professional psychological teachers. In addition, with the increasing pressure of employment, high-quality talents will replace high education and be more favored by employers. Therefore, college students should actively participate in social practice and public welfare activities, enhance their sense of responsibility and mission, and establish a correct world outlook, outlook on life, values, in order to remain invincible in the fierce competition.

5. Conclusion

To sum up, university libraries play a more and more important role in personnel training and quality education. The unique service concept, advanced service mode and rich service content of university libraries play an important role in the quality education of contemporary college students. In the era of knowledge-based economy, social changes are changing with each passing day. Only by seizing the opportunity, grasping the frontier scientific and technological achievements, and constantly exploring the new educational functions of libraries, can university libraries better serve teachers and students and higher education.
