**Abstract.** Based on the background of the construction of "Youth Horse Project" in Zhejiang colleges and universities, this paper analyzes the problems in the construction of "Youth Horse Project" in Zhejiang colleges and universities, and proposes the improvement path for the construction of "Youth Horse Project" in Zhejiang colleges and universities, hoping that it can serve as an effective reference for other provinces in carrying out "Youth Horse Project".

**Keywords:** universities, "Youth Horse Project", construction path

## 1 Introduction

The construction of the "Youth Horse Project" must be aimed at the realization of the Chineseization of Marxism, combined with the needs of China's youth growth and success, and based on the background of the times <sup>[1-5]</sup>. As the main target of the "Youth Horse Project", the youth in Zhejiang Province must take the implementation of the Party's education policy as the primary task of the construction of the "Youth Horse Project", and actively cultivate the youth into firm believers of Marxism <sup>[6-5]</sup>. It is necessary to make the implementation of the Party's educational policies and guidelines the primary task of the "Youth Horse Project", and actively cultivate young people into firm believers of Marxism <sup>[6-7]</sup>.

## 2 Problems in the construction of "Youth Horse Project" in Zhejiang universities

Although a lot of progress has been made in carrying out the Youth League Marxist Talent Training Project for college students in Zhejiang universities, a new period of requirements has been put forward as China enters a new period of socialist construction with Chinese characteristics. The YMCA project is constantly deepening and developing, and it is necessary to keep abreast of the times to see the problems that arise in the cultivation work. At present, the main problems are that the training bodies have

not yet formed a synergy, the training subjects are not sufficiently aware, the training methods need to be innovative and the training mechanism is not yet sound.

### **2.1 The main body of cultivation has not become a joint force**

Some colleges and universities have not formed a synergy with various sectors of society and have not established practice bases, resulting in a disconnection between theory and practice. In terms of cultivating people, it is not enough to rely only on the teachers of training courses, but to form a joint effort with teachers of Civics, teachers of professional courses, growth tutors, counsellors, alumni and outstanding students, to change from "Civics courses" to "curriculum Civics", and to build a "big Civics education". The "Big Thinking and Politics Education" pattern.

### **2.2 Insufficient cognition of the cultivation target**

Although some breakthroughs have been made in many aspects of cultivation work at present, and the cultivators have done a lot of work, the effect of cultivation still needs progress and improvement because there are still some problems in the cultivation subjects themselves. Firstly, there is some bias in the current Marxist understanding of university students and a lack of systematization. Secondly, some students are unable to persevere in the process of participation. Thirdly, some students are not purely motivated to learn when they participate in the training.

### **2.3 Cultivation methods need to be innovative**

At present, although Zhejiang colleges and universities are comprehensively carrying out the construction of youth Marxism training programs for college students, some colleges and universities lack innovation and still carry out training work according to the traditional mode. Through the survey, some college students think that the curriculum is not reasonable enough and some lectures are not closely related to the current times. The propaganda of colleges and universities for the training of young Marxists among university students does not currently form a propaganda atmosphere in public opinion and the internet. The training in universities is mainly an independent system, which has certain limitations in theory and practice. The cultivation work lacks a certain "youth flavor", and the cultivation work of college students' young Marxists lacks the language style that fits with the youth.

### **2.4 The cultivation mechanism is not yet complete**

Through the survey, we can find that the cultivation mechanism of Zhejiang universities is not perfect and complete. There is no reasonable and strict system; in terms of the training evaluation mechanism, some colleges and universities neglect the regular evaluation of trainees and cannot make effective adjustment according to specific situations; in terms of the guarantee mechanism, some colleges and universities lack In terms

of guarantee mechanism, some universities lack special funding. The "Youth Horse Project" involves a wide range of areas, and it is not enough to rely on the Communist Youth League alone, but requires the formation of a pattern of joint management, full participation and close cooperation among various departments.

### **3 The path of improving the construction of "Youth Horse Project" in Zhejiang universities**

#### **3.1 Linking cultivation departments**

The construction of "Youth Marxist Project" in Zhejiang colleges and universities needs the cooperation of cultivation departments to jointly coordinate and promote the effectiveness of cultivating young Marxists in Zhejiang colleges and universities. Zhejiang universities should provide students with good educational contents by combining their theoretical interests and thinking habits. With classroom teaching as the main focus, students are systematically and comprehensively taught Marxism and socialist ideas with Chinese characteristics, giving full play to the basic and systematic role of classroom learning. Secondly, Zhejiang colleges and universities should play the role of "three comprehensive" education. Party organizations, relevant functional departments and teaching departments should participate together. Party and league cadres, counselors, teachers of Marxist colleges and relevant administrative staff should work together to cultivate young Marxists in colleges and universities. In the process of cultivation, Zhejiang colleges and universities should train their students in different levels and grades according to the different stages they are in, pay dynamic attention to the ideological conditions of the students and plant Marxist beliefs thickly in the hearts of the majority of young people.

#### **3.2 Improve the effectiveness of cultivation**

In cultivating young Marxists, Zhejiang universities must conform to the development of young students, care about their psychological demands, deliver the truth of Marxism to students in a moving way with more temperature and true feelings, and make them feel the truthfulness of Marxism in their understanding, emotion, ability and action in accordance with the law of youth growth. At the same time, Zhejiang universities should focus on strengthening the self-cultivation of young students, prompting them to consciously strengthen their theoretical cultivation and form the habit of self-learning Marxist theory, so that they can form a strong interest in learning and applying Marxist theory according to the needs of the times and applying Marxist principles in practice. Finally, it is important to meet the cultural needs of students. Combine the principles of Marxism with the hot spots that students care about, their majors and their own strengths, use the form of discourse that the majority of young people enjoy to make Marxism enter the hearts of young people, strengthen their sense of identity and belonging to Marxist theory, and help them accept the connotations of Marxism in a more concrete and imaginative way.

### **3.3 Consolidate the training mechanism**

To implement the "Youth Horse Project" under the new situation, the Party Committee of Zhejiang universities should organize and implement the top-level work design of the "Youth Horse Project" based on the leadership of the Party, and do a good job of overall leadership, and all departments of the Party Committee of the university and the Party Committee of the second-level colleges should cooperate with each other and coordinate the work of the universities. The party committee departments and the party committee of the second level college should cooperate and the university should coordinate the allocation of resources, designate the training program with the standard, strictly control the training direction, and cultivate more party-oriented young university students. At the same time, we should improve the management and operation of the "Youth Horse Project", enhance the training effect with more systematic and professional training principles, adhere to the unity of theory and practice, self-education and organizational education, as well as the unity of long-term training and short-term training, so as to improve the learning and practice consciousness of the majority of young people. In addition, the evaluation mechanism should be optimized. In the process of evaluating young Marxists, we should adhere to the scientific and comprehensive criteria as the evaluation principle, and insist on the combination of individual and multiple evaluations, cognitive and practical evaluations as well as the combination of process and conclusion evaluations, so as to systematically motivate young students to become a committed Marxist. Finally, a sound tracking mechanism is needed. In order to improve the quality of training, it is necessary to establish an information database for the "Youth Marxist Project" and analyse the growth pattern of the students in terms of data and information. For the young students who have completed the project, dynamic management should be implemented to understand their development.

## **4 Conclusion**

In this paper, we have clarified the problems of the construction of the "Youth Horse Project" in Zhejiang universities in the light of the background of the times, and sought to put forward measures and suggestions for the implementation of the "Youth Horse Project" in Zhejiang universities in three aspects: linking up the training departments, improving the training effectiveness and consolidating the training mechanism.
