**Abstract.** All of the articles in this proceedings volume have been presented at the Conference on Digital Humanities during 3–5 November 2022 in Bandung, Indonesia. These articles have been peer reviewed by the members of the Paper Peer Review Committee and approved by the Editor-in-Chief, who affirms that this document is a truthful description of the conference’s review process.

All of the articles in this proceedings volume have been presented at the Conference on Digital Humanities during 3–5 November 2022 in Bandung, Indonesia. These articles have been peer reviewed by the members of the Paper Peer Review Committee and approved by the Editor-in-Chief, who affirms that this document is a truthful description of the conference’s review process.

## 1 Review Procedure

The reviews were double-blind. Each submission was examined by at least 2 reviewer(s) independently.

We used a conference system EasyChair and an internal campus-based paper hub system, gcs.itb.ac.id.

Initial consideration was given to the submissions’ overall quality as well as their applicability. Following the initial screening, the papers were distributed for peer review by matching each paper’s topic with the reviewers’ expertise. In order for an article to be taken into consideration for publication, it was necessary for it to have gotten positive feedback from both of the reviewers.

After addressing the reviewers’ recommendations, authors of rejected submissions were offered the chance to improve and resubmit their work. The decision to accept or reject a revised document was final.

To improve the peer review quality, we treat confidentiality highly when we distributed the papers and made sure the papers did not go to closely related authors.

## 2 Quality Criteria

Reviewers were requested to evaluate the quality of submissions based only on the academic value of their material in the following areas: The papers were selected according to the conference scope and themes of the conference, as detailed on our conference website. The review committee rejected papers that did not comply with the scope and themes of the conference.

1. We selected the papers based on their originality, novelty, and timeliness of the research, shown by the authors in each paper, such as the time the research was conducted, the data collected, the research gap between previous research and current research of each paper.
2. The methods, analyses, and results were sound. The claims researchers made in their papers were strongly backed by valid data, sound arguments, thorough analysis and clear explanation on the results of the research. Yet, some of the papers were conceptual due to their ongoing process.
3. The papers we selected have shown adherence to the ethical standards and codes of conduct relevant to their research field.
4. The English language authors use in their paper shows is clear, cohesive, and accurate. Tables and figures are also presented accordingly.

In addition, all of the articles have been checked for textual overlap in an effort to detect possible signs of plagiarism by the publisher. We used Turnitin to detect any potential of plagiarism of each paper.

## 3 Key Metrics

Total submissions	39
Number of articles sent for peer review	26
Number of accepted articles	20
Acceptance rate	51.2%
Number of reviewers	6

## 4 Competing Interests

Some of the authors (in this case, Nia Kurniasih, Sutiadi Rahmansyah, and Prima Roza) were supervised by the Editor-in-Chief, who has recused himself from handling their submissions and has delegated them to colleagues with no personal interests in them.
