

not healthy, not civilized consumption patterns, resulting in waste of resources is quite amazing. Today's saving is to develop a more scientific and reasonable consumer attitudes and habits, thus saving the glorious, shameful waste of social morality. It can be used only let the savings become a tradition, a habit, put the saving ideas into the social cultural. It's a part of the advanced national culture and the fine national tradition to advocate the saving way of life, and regard it as an important part of the conservation-oriented society[3]Set up the saving glory, waste shameful culture idea set the sacrifice descendants living conditions of shame for social fashion, is the current activities to protect the ecological environment of the important moral impetus.

2.3. Absorb some beneficial connotation of economical from the modern developed countries and advocate the economical way of life

Life consumer is not a small figure. Most western are very saving in their daily lives, Such as the British use the paper and mail to the presentation data, used to accumulate up never discarded stay to do the next thing with the print on the back. Another case in primary school textbooks, younger students often took the high-grade, until it should not be reused till. Many Swedes work does not drive a car, because they think a person driving a car trip is too wasted under special circumstances. Germany is the green one of the leading countries in the world today. Leading mainly reflected in two aspects: First, the strong development of environmental technologies and applications, second, the public environmental concern and participation. German household in front of the trash can reflect the German environmental awareness. The first arrived in Germany, will inevitably have a trash can in front of colorful curiosity. The residential front of generally have four bright yellow blue black green trash,

are affixed to the a straightforward waste classification pattern. Stated on the yellow barrels loaded scrap metal, collect waste paper box and plastic blue barrel , black barrel , ordinary garbage, trash a new family of green barrels collect new classification from ordinary garbage out tea and shells biowaste. German provisions are very complex in the trash in fact, but most Germans work in accordance with the provisions to be strict in theirs demands. Waste separation and recovery is conducive to waste recycling and reduce waste pollution, while it can increase economic efficiency. Implementation of garbage separation and recovery is just a microcosm of the importance of environmental protection in Germany. It can urge the whole society to save resources from the conservation awareness of developed countries. It's a kind of reference for our country which is ravaged by resources.

In short, we must enhance the sense of hardship under the growing situation what the development of economic depend on the energy , and build a huge network of building a resource-saving society by our will and action. Guide the consumption patters of change by the consumption concept of conserve resources and gradually form a civilization and saving patterns of behavior, form a good habit that everyone has a sense of responsibility and put forth our strength for building a resource-saving society.
