

Conclusion

“Ecology is the soul of our living, is the footstone of carrying human civilization, is the deep foundation that determined the material production and the existence and long-term stable development of human society”. [5] But with the progress of science and technology, there has been serious disaster by human hand-made such as ecological destruction, newborn disease, ozone depletion, soil erosion, desertification, and so on. And along the way, people began to reflect on the mode of human society development since the Industrial Revolution. Ecological civilization came into being, conforming to the historical process of the development of human civilization and the development trend of the times.

“The realization of ecological civilization and sustainable development is not just the drill in ecology, economics and other technical aspects, but mainly a profound revolution in the cultural dimension as human values”. [6] There is inseparable from the support of science and technology means and the guarantee of laws and regulations, also the strengthening of the people's awareness of ecology and the shape of ecological values when we take the road of sustainable development and construct ecological civilization; higher education adapted to ecological civilization need to create a multi-dimensional system in ecological education, achieve the own ecological steering, cultivate qualified ecological person for the construction of ecological civilization. In this sense, ecological civilization gives higher education with new connotation, and the ecological education has created a new form of higher education.

It is the inevitable choice for higher education to turn into ecological education in the era of ecological civilization. Ecological education should not only the ecology of education content, but the ecology of education itself; not only involves the popularity of ecological knowledge just like ecology and environmental protection, also commits to culture “ecological person” with ecological consciousness, ecological wisdom and ecological ethics; not just a certain discipline or professional task, but a very complex system which needs coordination and cooperation on multi-disciplinary, multi-level, multi-dimensional.
